Creating Service in Kubernetes

Task 1: Start Kubernetes in Docker-Desktop

- Start Kubernetes service in Docker-Desktop

Task 2: Creating a Service

Create a service to expose the deployed application within the Kubernetes cluster. You can use the following sample YAML manifest as a reference:

```yaml
apiVersion: v1
kind: Service
metadata:
  name: my-service
spec:
  selector:
    app: lbnginx
  ports:
    - protocol: TCP
      port: 80
      nodePort: 30001
  type: NodePort
```

- Apply the service using the following command:

```
sachinaggarwal@Sachins-MacBook-Air k8s % kubectl apply -f service.yml
service/my-nginx-service-1 created
```

- Verify that the service is created by running the following command:

```
sachinaggarwal@Sachins-MacBook-Air k8s %

kubectl get services

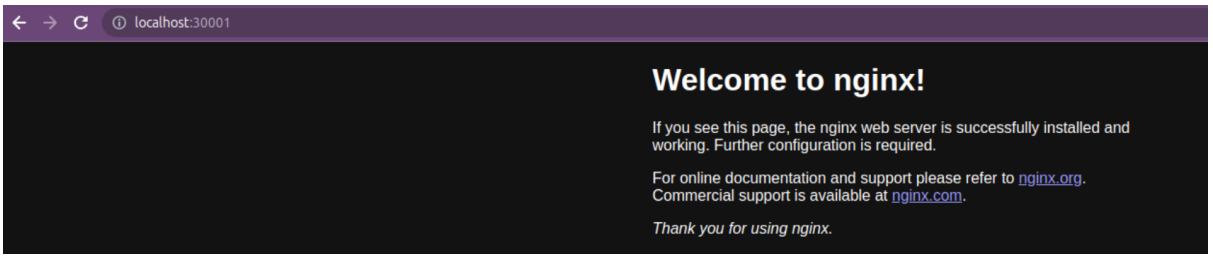
NAME                TYPE        CLUSTER-IP      EXTERNAL-IP   PORT(S)        AGE
kubernetes          ClusterIP   10.96.0.1       <none>        443/TCP        10h
my-nginx-service-1  NodePort    10.101.32.176   <none>        80:30003/TCP   88s
my-service          NodePort    10.97.213.81    <none>        80:30001/TCP   9h
```

Task 4: Accessing the Service

- Access the service using port forwarding. Run the following command:

Access the Nginx server running in the service by opening a web browser and navigating to

```
http://localhost: 30001
```



Task 5: Deleting the Service

Delete the service using the following command:

```
kubectl delete service my-serwvice
```

Verify that the service has been deleted by running the kubectl get services command.

Task 6: Cleanup

Delete any remaining deployments, services, and resources created during the exercise using the appropriate kubectl delete commands.

Task 7: Documentation and Best Practices

Document your findings and the best practices for creating and managing services in Kubernetes.

Through this exercise, you'll gain a better understanding of how to create and manage services to expose applications within a Kubernetes cluster. Adjust the exercise based on your specific use case and requirements.
