

UNIVERSITY OF PETROLEUM & ENERGY STUDIES

Dehradun

ACO LAB

NAME- YADRISHI DIXIT

BRANCH- COMPUTER SCIENCE ENGINEERING

BATCH- B-4 DEVOPS

SAP ID- 500097959

ROLL NO- R2142211468

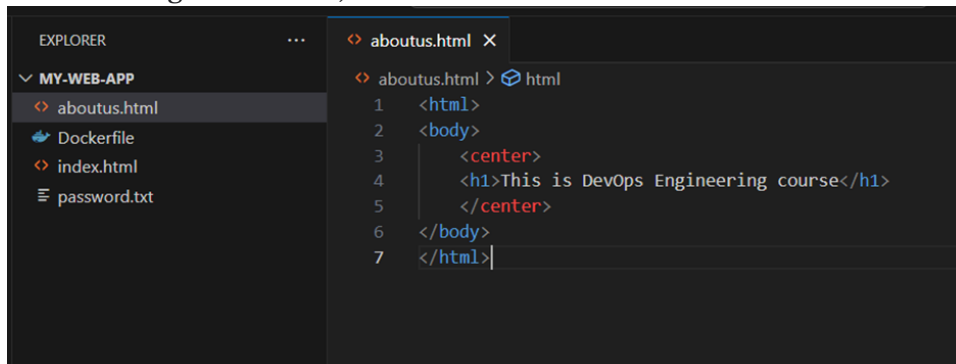

SUBMITTED TO- Dr. Hitesh Kumar Sharma

EXPERIMENT-2

AIM : .dockerignore in Docker

Create a Sample Project:

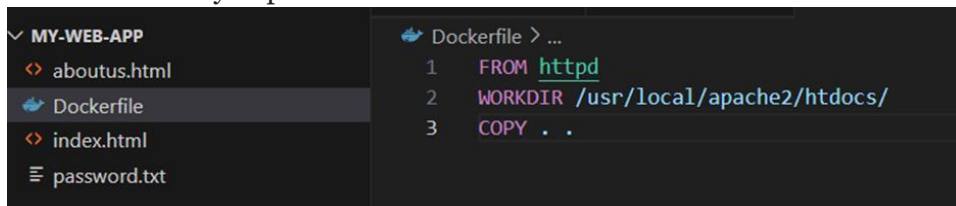

- Create a simple project directory with various types of files, including source code, configuration files, and build artifacts.

```
aboutus.html X
aboutus.html > html
1 <html>
2 <body>
3   <center>
4     <h1>This is DevOps Engineering course</h1>
5   </center>
6 </body>
7 </html>
```

Create a Dockerfile:

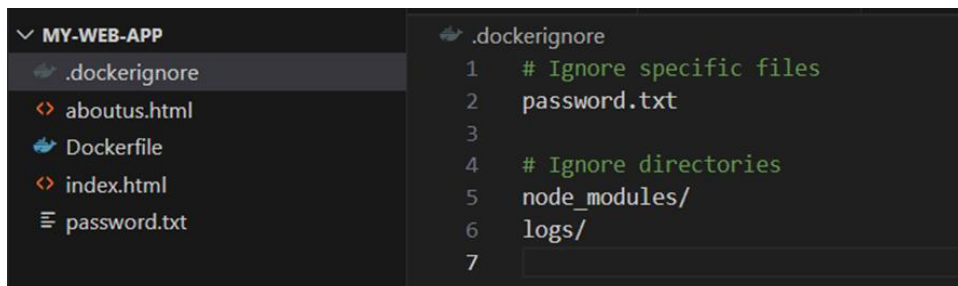

- Write a Dockerfile that specifies the build steps for your application, including any necessary dependencies.

```
Dockerfile > ...
1 FROM httpd
2 WORKDIR /usr/local/apache2/htdocs/
3 COPY . .
```

Create a .dockerignore File:

- Create a .dockerignore file in the root directory of your project.
- Add specific files or directories to the .dockerignore file that you do not want to be included in the Docker image during the build process.

```
.dockerignore
1 # Ignore specific files
2 password.txt
3
4 # Ignore directories
5 node_modules/
6 logs/
7
```

Build the Docker Image:

- Use the docker build command to build the Docker image from the Dockerfile.

```
9198@DELL N06864 ~/OneDrive/Desktop/SEMS/ACO-LAB-2021-25(Local)/my-web-app (main)
$ docker build -t my-web-app:1.0.0 .

-> naming to docker.io/library/my-web-app:1.0.0

What's Next?
View a summary of image vulnerabilities and recommendations → docker scout quickview
```

- Observe the build context and check which files are being included in the Docker image.

```
PS C:\Users\91983\OneDrive\Desktop\SEMS\ACO-LAB-2021-25(Local)\my-web-app> docker run -it my-web-app:1.0.1 /bin/bash
root@756bb3129e81:/usr/local/apache2/htdocs# ls
Dockerfile aboutus.html index.html
root@756bb3129e81:/usr/local/apache2/htdocs#
```

Modify .dockerignore and Rebuild:

- Modify the .dockerignore file to exclude different types of files or directories from the Docker image.
- Rebuild the Docker image and observe the changes in the build context.

Test the Docker Image:

- Run the Docker image as a container using the docker run command.
- Verify that the container works as expected, despite certain files being excluded from the Docker image.

```
PS C:\Users\91983\OneDrive\Desktop\SEMS\ACO-LAB-2021-25(Local)\my-web-app> docker run --name container1 my-web-app:1.0.1
AH00558: httpd: Could not reliably determine the server's fully qualified domain name, using 172.17.0.2. Set the 'ServerName' directive globally to suppress this message
AH00558: httpd: Could not reliably determine the server's fully qualified domain name, using 172.17.0.2. Set the 'ServerName' directive globally to suppress this message
[Thu Nov 16 07:14:34.387957 2023] [mpm_event:notice] [pid 1:tid 140016788367232] AH00489: Apache/2.4.58 (Unix) configured -- resuming normal operations
[Thu Nov 16 07:14:34.388445 2023] [core:notice] [pid 1:tid 140016788367232] AH00094: Command line: 'httpd -D FOREGROUND'
```

Optimize the .dockerignore File:

- Experiment with different patterns and wildcards in the .dockerignore file to optimize the build context and reduce the image size.

Check Image Size and Contents:

- Use the docker image ls and docker image inspect commands to check the size of the Docker image and its contents.

```
91983@DELL MINGW64 ~/OneDrive/Desktop/SEM5/ACO-LAB-2021-25(Local)/MY-WEB-APP (main)
$ docker image ls
```

```

- Command that list the hash id of the image being created and then list the size of the image using its hash id :

```

91983@DELL MINGW64 ~/OneDrive/Desktop/SEM5/ACO-LAB-2021-25(Local)/MY-WEB-APP (main)
$ docker images -q --no-trunc my-web-app:1.0.1
sha256:99650d2deb6c970c64395f70d741ec0c46b73a0eda4f7b7d3a903102c7f6a4ff

91983@DELL MINGW64 ~/OneDrive/Desktop/SEM5/ACO-LAB-2021-25(Local)/MY-WEB-APP (main)
$ docker inspect --format='{{.Size}}' sha256:99650d2deb6c970c64395f70d741ec0c46b73a0eda4f7b7d3a903102c7f6a4ff
168330828

```

Documentation and Best Practices:

- Document your findings and the best practices for using the .dockerignore file in your projects.

Through this exercise, you'll gain a better understanding of how to use the .dockerignore file effectively to optimize Docker image builds and reduce image sizes. Adjust the exercise based on your specific project requirements.
